

## GamCo Secure Email

Protecting your business from email threats...

### Pricing

R5 pm per email adress

## Features

### Works with your infrastructure

GamCo can filter messages no matter what mail server you're using.

Exchange user? cPanel? Postfix? Sendmail? No matter what mail server you're running, or even if you're using a hosted mail solution, Gamco can work for you. A quick two-minute change to your domain's DNS MX records, and GamCo will start filtering messages for you, and only delivering the "clean" messages to your mail server.

Messages destined for your domain wind up being delivered to the GamCo servers, where we analyze and filter out spam messages. That leaves only the clean messages for your users, which we then deliver directly to your mail server.

For extra security, you can make sure that email connections to your mail server only come from GamCo, to eliminate what we like to call "transient spam", where a spammer will ignore a domain's MX records and attempt to directly connect to your mail server themselves.

### GamCo Secure Emails

With advanced spam detection, 100% virus protection. GamCo Secure Email is the ultimate line of defence in protecting businesses against spam, viruses. Delivered as an integrated cloud service and supported by local GamCo engineers, your business can start to benefit from the peace of mind of having a spam and virus free inbox.

## Features

### Fast filtering and delivery

We filter out spam and deliver clean messages to you within seconds. When a message comes into the GamCo system, we apply thousands of filters, including our proprietary sender reputation filters, shared block lists, machine learning algorithms, and message content filtering. All of these filters run within seconds, and only clean messages wind up getting delivered to you. If your mail server goes offline, that's no problem. We'll continue to hold onto your messages for up to a month, and then once your server comes back online, those queued messages will be automatically delivered to you.

### Robust client dashboard

Manage all of your preferences, quarantine, and delivery from one location. Within the client dashboard, you can see logs of every message that was destined for your account, and statistics about all the domains in your account. Users in any of your domains can set their own custom preferences, or you can set domain-wide (or account-wide) preferences as well, including approved senders, blocked senders, filter sensitivity, quarantine digest frequency, and much much more
